NIVA CARTRIDGE INTERCONNECT — ENGINEERING PROTOTYPE — NOT FOR FABRICATION

Cell: EEMB LP502030 class with integrated protection module (OV/UV/OC/short) and NTC lead — protection layer 1.
F1 polyfuse in series with every external P+ path (pod and dock) — independent protection layer 2.
NTC is passed to the dock only; the pod never sees it. No active parts in the cartridge.
Dock pads are exposed only on the cartridge rear face, which the cradle covers while the pod is worn.

Generated by work/build_niva_schematic_revC.py
NOT FOR FABRICATION. Values, protection and layout require bench validation.
